'Triple Glazed' Cut-Glass Designs

Our Abstract, Clarity and Elegance designs illustrated within this brochure are created using traditional cut glass and genuine Brass or Zinc caming.

These Brass and Zinc products use age old manufacturing techniques with modern materials to create stunning designs. These designs are only available as triple glazed units, where the decorative element is encapsulated inside an insulated glass unit. This creates an easy-to-clean and maintenance free product. Due to the manufacturing techniques involved, it is not possible to change glass types or came colours from those shown in the catalogue.

The Benefits and Features of a Plasway Composite Door:

- Can be supplied with matching colour both sides or white on the inside leaf to suit any home decor. The door frame is white as standard.
- Has a deeply grained surface, creating a natural look and feel with excellent thermal values. Unlike timber, our doors will never rot, warp, swell, shrink or need repairing.
- Comes with a 10 year guarantee.
- Multi-point locking system with centre dead-bolt to Police preferred security specifications.
- Brass anti-drill lock cylinder.
- High-security lock meets guidelines set by the Association of British Insurers.
- Virtually maintenance free apart from light lubrication of the hinges and moving parts of the locking system.
- Variety of glass options will make the door individual and personal, giving it great curb appeal. A full range of co-ordinating door furniture and accessories are also available.
